PRELIMINARY AMENDMENT

Assistant Commissioner for Patents
Washington, D.C. 20231

Sir:

As part of the accompanying request for filing of a divisional application under 37 CFR 1.53(b)(1), before calculating the filing fee and preliminary to the examination of the above-identified application, please amend the application as indicated below.

IN THE SPECIFICATION

Please make amendments to the Specification as indicated below.

Please replace the paragraph on page 1, lines 4-15 with the following paragraph:

This application is a divisional of U.S. Serial No. 09/178,115 (filed October 23, 1998), which will issue as U.S. Patent No. 6,297,041 on October 2, 2001, which is a continuation-in-part of U.S. Serial No. 08/787,739 (filed January 24, 1997), which issued as U.S. Patent No. 6,027,887 on February 22, 2000, which in turn is a continuation-in-part of the following seven U.S. Serial Nos., all of which were filed on June 7, 1995: U.S. Serial No. 08/485,049, which issued as U.S. Patent 6,204,370 on March 20, 2001, U.S. Serial No. 08/486,756, which issued as U.S. Patent 5,981,711 on November 9, 1999, U.S. Serial No. 08/477,504, which issued as U.S. Patent No. 5,972,353 on October 26, 1999, U.S. Serial No. 08/481,658, which issued as U.S. Patent No. 5,955,075 on September 21, 1999, U.S. Serial No. 08/485,862, which issued as U.S. Patent No. 5,989,838 on November 23, 1999, U.S. Serial No. 08/485,863, which issued as U.S. Patent No. 6,093,858 on July 25, 2000 and U.S. Serial No. 08/487,077, issued as U.S. Patent No. 6,069,242 on May 30, 2000. Those seven

applications are continuations-in-parts of now pending U.S. Serial No. 08/260,190 (filed June 15, 1994), which, in turn, is a continuation-in-part of U.S. Serial No. 08/177,093 (filed December 30, 1993), which issued as U.S. Patent No. 6,051,226 on April 18, 2000, which is in turn a continuation-in-part of U.S. Serial No. 07/964,589 (filed October 21, 1992), which issued as U.S. Patent No. 5,387,676 on February 7, 1995. This application declares priority under 35 USC § 120 from those U.S. applications and patents, and also under 35 USC § 119 from the now abandoned Czechoslovakian patent application PV-709-92 (filed March 11, 1992).

Please replace the paragraph on page 3, lines 12-25 with the following paragraph:

MN/CA IX has a number of properties that distinguish it from other known CA isoenzymes and evince its relevance to oncogenesis. Those properties include its density dependent expression in cell culture, (e.g., HeLa cells), its correlation with the tumorigenic phenotype of somatic cell hybrids between HeLa and normal human fibroblasts, its close association with several human carcinomas and its absence from corresponding normal tissues [e.g., Zavada et al., Int. J. Cancer, 54: 268-274 (1993); Pastorekova et al., Virology, 187: 620-626 (1992); Liao

et al., Am. J. Pathol., 145: 598-609 (1994); Pastorek et al., Oncogene, 9: 2788-2888 (1994); Cote, Women's Health Weekly: News Section, p. 7 (March 30, 1998); Liao et al., Cancer Res., 57: 2827 (1997); Vermylen et al., "Expression of the MN antigen as a biomarker of lung carcinoma and associated precancerous conditions," Proceedings AACR, 39: 334 (1998); McKiernan et al., Cancer Res., 57: 2362 (1997); and Turner et al., Hum. Pathol., 28(6): 740 (1997)]. In addition, the *in vitro* transformation potential of MN/CA IX cDNA has been demonstrated in NIH 3T3 fibroblasts [Pastorek et al., id.].

Please replace the paragraph on page 11, lines 23-26 with the following paragraph:

Identified herein is the location of the MN protein binding site. Also identified are MN oligopeptides that compete for attachment to cells with immobilized MN protein. Such oligopeptides prevent cell-cell adhesion and the formation of intercellular contacts.

Please replace the paragraph on page 14, lines 22-30 with the following paragraph:

A hybridoma that produces a representative MN-specific antibody, the monoclonal antibody M75 (Mab M75), was deposited at the ATCC under Number HB 11128 as indicated above. The M75

antibody was used to discover and identify the MN protein and can be used to identify readily MN antigen in Western blots, in radioimmunoassays and immunohistochemically, for example, in tissue samples that are fresh, frozen, or formalin-, alcohol-, acetone- or otherwise fixed and/or paraffin-embedded and deparaffinized. Another representative MN-specific antibody, Mab MN12, is secreted by the hybridoma MN 12.2.2, which was deposited at the ATCC under the designation HB 11647.

Please replace line 25 on page 17 with the following line:

IPTG - isopropyl-beta-D-thiogalacto-pyranoside

Please replace the paragraph on page 31, lines 7-13 with the following paragraph:

In Zavada et al., id., the isolation of a partial MN cDNA clone of 1397 bp in length was described. A lambda gt11 cDNA library of LMCV-infected HeLa cells was prepared and subjected to immunoscreening with Mab M75 in combination with goat anti-mouse antibodies conjugated with alkaline phosphatase. One positive clone was picked and subcloned into the NotI site of pBluescript KS [Stratagene; La Jolla, CA (USA)] thereby creating pBluescript-MN.

TABLE 1 on page 34, lines 1-33 has been amended as follows:

TABLE 1

Exon-Intron Structure of the Human MN Gene

Exon	Size	Genomic Position**	SEQ ID NO	5'splice acceptor	SEQ ID NO
1	445	*3507-3951	28	AGAAG gtaagt	67

** positions are related to nt numbering in whole genomic sequence including the 5' flanking region [Figure 2A-F]

* number corresponds to transcription initiation site determined below by RNase protection assay

Please replace line 26 on page 45 with the following line:

EMSA Supershift Analysis

Please replace the paragraph on page 71, lines 27-32 with the following paragraph:

MAb M75. Monoclonal antibody M75 (MAb M75) is produced by mouse lymphocytic hybridoma VU-M75, which was initially deposited in the Collection of Hybridomas at the Institute of Virology, Slovak Academy of Sciences (Bratislava, Slovakia) and was deposited under ATCC Designation HB 11128 on September 17, 1992 at the American Type Culture Collection (ATCC). The production of hybridoma VU-M75 is described in Zavada et al., WO 93/18152.

Please replace the paragraph on page 78, lines 13-18 with the following paragraph:

The M75 MAb (or, for example, as a single chain antibody, or as its variable region) is exemplary of such a MN-specific antibody. Example 5 discloses heptapeptides (SEQ ID NOS: 107-109) that bind to the enzymatic center of the CA domain of the MN protein and, selected peptides or proteins comprising such heptapeptides would also be expected to bind to a binding site on the extracellular domain of the MN protein.

Please replace the paragraph on page 81, lines 7-15 with the following paragraph:

MN proteins and/or polypeptides may be synthesized or prepared recombinantly or otherwise biologically, to comprise one or more amino acid sequences corresponding to one or more epitopes of the MN proteins either in monomeric or multimeric form. Those proteins and/or polypeptides may then be incorporated into vaccines capable of inducing protective immunity. Techniques for enhancing the antigenicity of such polypeptides include incorporation into a multimeric structure, binding to a highly immunogenic protein carrier, for example, keyhole limpet hemocyanin (KLH), or diphtheria toxoid, and administration in combination with adjuvants or any other enhancers of immune response.

Please replace the paragraph on page 98, lines 24-30 with the following paragraph:

The MN protein is a candidate for being the product of the critical oncogene; its expression in the hybrids has been shown to correlate with their tumorigenicity [e.g., Zavada et al. (1993), supra]. The present results indicate that additional mechanisms might exist, which are able to "heal" a cancerous cell. Understanding the molecular mechanisms of action of MN

protein in normal and in tumor cells and elucidating how the reversion works may provide new approaches to cancer therapy.

Please insert the following SEQUENCE LISTING at the end of the Specification on page 117 beginning a new page

<220>
<221> misc_feature
<222> (1)..(2501)
<223> region 5' to transcription initiation site as determined by RNase protection assay (nucleotide 3507 of Figures 2A-2F and of SEQ ID NO: 5), corresponding to region of SEQ ID NO: 5 and Figures 2A-2F from nucleotide (7) to nucleotide (2507), in which region some regulatory elements are probably situated.

<220>
<221> unsure what base is at position 1968
<222> (1968)
<223> unsure of base at position 1968, which is the same unknown base as that at position 1974 of SEQ ID NO. 5, i.e., the full-length MN genomic sequence, and of that unknown at position 1968 of SEQ ID NO: 90, and

unknown at position 647 of SEQ ID NO: 110. That unknown base is in the 5' region flanking the transcription initiation site (3507) as determined by RNase protection assay.

IN THE CLAIMS

Please cancel Claims 1-21, 28 and 29. Please amend the claims as follows.

Please replace Claim 22 with the following new Claim 22:

22. (Amended) An anti-idiotypic antibody to an antibody which specifically binds to an MN protein, wherein said MN protein is encoded by a nucleic acid selected from the group consisting of:

(a) SEQ ID NO: 1;

(b) polynucleotides that hybridize under stringent conditions to SEQ ID NO: 1's complement; and

(c) polynucleotides that differ from SEQ ID NO: 1 or from the polynucleotide sequences of (b) due to the degeneracy of the genetic code.

Please replace Claim 23 with the following new Claim 23:

23. (Amended) An anti-idiotypic antibody according to Claim 22, wherein said antibody that is specific for said MN protein, is either the M75 monoclonal antibody secreted from the hybridoma VU-M75, which was deposited at the American Type Culture Collection under ATCC No. HB 11128, or the MN12 monoclonal antibody that is secreted from the hybridoma MN

12.2.2, which was deposited at the American Type Culture Collection under ATCC No. HB 11647.

Please add new Claims 30-52.

30. An anti-idiotypic antibody to an antibody which specifically binds to an MN polypeptide, wherein said MN polypeptide is encoded by a nucleic acid that comprises a polynucleotide containing at least 29 nucleotides, said nucleic acid being selected from the group consisting of:

(a) SEQ ID NO: 1;

(b) polynucleotides that hybridize under stringent conditions to SEQ ID NO: 1's complement; and

(c) polynucleotides that differ from SEQ ID NO: 1 or from the polynucleotide sequences of (b) due to the degeneracy of the genetic code.

31. The anti-idiotypic antibody according to Claim 30, wherein said antibody that is specific to said MN polypeptide is either the M75 monoclonal antibody secreted from the hybridoma VU-M75, which was deposited at the American Type Culture Collection under ATCC No. HB 11128, or the MN12 monoclonal antibody that is secreted from the hybridoma MN 12.2.2, which was

deposited at the American Type Culture Collection under ATCC No.
HB 11647.

32. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 30.

33. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 31.

34. An anti-anti-idiotypic antibody according to Claim 32 which is polyclonal.

35. An anti-anti-idiotypic antibody according to Claim 33 which is polyclonal.

36. The anti-idiotypic antibody according to Claim 30 wherein said nucleic acid comprises a polynucleotide containing at least 50 nucleotides.

37. The anti-idiotypic antibody according to Claim 30 wherein said polynucleotide comprises at least 100 nucleotides.

38. The anti-idiotypic antibody according to Claim 30 wherein said nucleic acid comprises a polynucleotide containing at least 150 nucleotides.

39. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 36.

40. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 37.

41. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 38.

42. An anti-idiotypic antibody to an antibody which specifically binds to an MN polypeptide, wherein said MN polypeptide is encoded by a nucleic acid that comprises a polynucleotide containing at least 25 nucleotides, said nucleic acid being selected from the group consisting of:

(a) SEQ ID NO: 1;

(b) polynucleotides that hybridize under stringent conditions to SEQ ID NO: 1's complement; and

(c) polynucleotides that differ from SEQ ID NO: 1 or from the polynucleotide sequences of (b) due to the degeneracy of the genetic code.

43. The anti-idiotypic antibody according to Claim 42 wherein said nucleic acid comprises a polynucleotide containing at least 27 nucleotides.

44. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 42.

45. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 43.

46. The anti-idiotypic antibody according to Claim 22 wherein said MN protein is encoded by SEQ ID NO: 1 or by a fragment of SEQ ID NO: 1.

47. The anti-idiotypic antibody according to Claim 30 wherein said MN polypeptide is encoded by a fragment of SEQ ID NO: 1.

48. The anti-idiotypic antibody according to Claim 42 wherein said MN polypeptide is encoded by a fragment of SEQ ID NO: 1.

49. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 46.

50. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 47.

51. An anti-anti-idiotypic antibody to the anti-idiotypic antibody according to Claim 48.

52. The anti-idiotypic antibody according to Claim 22 wherein said stringent hybridization conditions comprise 50% formamide at 42 degrees C.

REMARKS

To assist in the examination of this application and as required by 37 CFR 1.121, enclosed herewith as Appendix 1 is a marked up version of the changes made to the specification and claims to indicate how the previous version of the specification has been modified to produce the clean replacement paragraphs.

The modifications are indicated by underlining and in bold type for additions, and by strikeouts for deletions. Also enclosed as Appendix 2 is a clean set of all the claims now pending the accordance with 37 CFR 1.121(c)(3).

Specification

The Specification has been amended to claim priority from the parent, grandparent, great-grandparent, great-great grandparent and great-great-great-grandparent applications and to update the status of those priority applications. The Specification has also been amended to correct a number of typographical/proofreading errors.

The Specification at page 3 has been amended to correct a typographical/proofreading error in the year of publication of an article by Zavada et al., in the International Journal of Cancer. The Specification has also been amended to correct other obvious typographical/proofreading errors.

The Specification has been amended in Table 1, line 5, page 34 in order to replace "Intron" with "Exon". Page 33, lines 20-25 reads as follows:

Exon-Intron Structure of Complete MN Genomic Region

The complete sequence of the overlapping clones contains 10,898 bp (SEQ ID NO: 5). Figure 5 depicts the organization of the

human MN gene, showing the location of all 11 exons as well as the 2 upstream and 6 intronic Alu repeat elements. All the exons are small, ranging from 27 to 191 bp, with the exception of the first exon which is 445 bp. The intron sizes range from 89 to 1400 bp.

[Emphasis added.] As the above quote shows, the MN gene contains 11 exons, and that the first exon contains 445 base pairs. The top section of Table 1 depicts 11 regions wherein the first region contains 445 base pairs. Further, the same Table 1 can be found in many of the issued MN patents including U.S. Patent 5,972,353. Table 1 (at column 18) of U.S. Patent No. 5,972,353 reads "Exon" on its fifth line. Applicants respectfully submit that the amendment at page 34 of the instant application corrects a typographical, proofreading error that would be obvious to those of skill in the art.

Claims

Applicants have canceled Claims 1-21, 28 and 29 in that the instant application is a divisional of its parent application - U.S. Serial No. 09/178,115. The parent application was subject to a 5-way Election/Restriction Requirement mailed from the U.S. Patent and Trademark Office (PTO) on June 21, 2000. The claims of the instant application are based upon the Group II claims of that Election/Restriction Requirement ["II. Claims 9-11 and 22-

27, drawn to a MN-specific antibody, classified in class 530, subclass 387.1."]

Appendix 1 shows the amendments made to Claims 22-27 of the parent application. Applicants respectfully submit that those amendments and the addition of new Claims 30-52 are made to point out with more particularity and clarity the subject matter regarded by the Applicants as their invention, and that no new subject matter has been added by those amendments and new claims.

Support in the Specification concerning anti-idiotypic antibodies to MN-specific antibodies and anti-anti-idiotypic antibodies to such anti-idiotypic antibodies can be found at least at page 12, line 29 to page 13, line 31; at page 15, lines 24-33; at page 75, line 11 to page 76, line 21; at page 81, lines 27-32; and at page 122, lines 9-12.

The amendment to Claim 22 specifies with particularity and clarity the term "MN-specific antibody," and that terminology reflected in new Claims 30-52 is supported throughout the Specification, e.g., at least at page 7, line 12 to page 15, line 14; more specifically, e.g., at least at page 7, lines 12-20, at page 9, lines 18-24, at page 10, lines 15-24, at page 12, lines 29-31, at page 13, lines 12-18, at page 13, lines 27-31 and at page 14, lines 4-5.

Stringent hybridization conditions, to which independent Claims 22, 30 and 42 refer, are described and exemplified in the Specification at least at page 60, line 6 to page 61, line 10. Specifically, the condition of "50% formamide at 42 degrees C" of new Claim 52 is supported at least at page 60, lines 13-19, at page 7, lines 12-21 and at page 8, lines 7-20.

The terms "protein" and "polypeptide" of the instant claims are defined in the Specification at page 53, lines 7-10. Whereas "polypeptide" is composed of "50 or less amino acids," "a protein" is "composed of more than 50 amino acids."

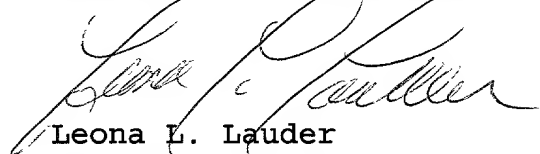

The phrases concerning "a polynucleotide containing" different numbers of nucleotides -- "at least 29 nucleotides" (Claim 30), "at least 50 nucleotides" (Claim 36), "at least 100 nucleotides" (Claim 37), "at least 150 nucleotides" (Claim 38), "at least 25 nucleotides" (Claim 42), and "at least 27 nucleotides" (Claim 43) -- are supported in the Specification at least at page 8, lines 3-6, at page 8, line 30 to page 9, line 1, and at page 60, lines 26-29.

Applicants respectfully conclude that no new matter has been entered by the above amendments and new Claims 30-52.

CONCLUSION

Applicants respectfully request that the above amendments to Claims 22-27 of the parent application and and new Claims 30-52 be entered into the instant application. Applicants respectfully submit that the claims as presented are in condition for allowance, and earnestly request their prompt allowance. If the undersigned Attorney for the Applicants can be of any assistance in regard to this Preliminary Amendment, she can be reached at (415) 981-2034.

Respectfully submitted,

Leona L. Lauder
